

Press Release

Verum Software Technologies

October 5, 2011

Waalre, The Netherlands

Verum and Methods2Business Form Partnership

Verum Software Technologies today announced the signing of a new partnership with Methods2Business, a provider of expert knowledge and consultancy services in advanced software design and verification methods. As a Verum Consultancy Partner, Methods2Business will employ the ASD:Suite for customer projects that require rapid development of high quality, defect-free software.

Robert Howe, Verum CEO, commented, “Methods2Business are experts in the field of innovative design and verification techniques, which makes them an ideal partner for Verum and the ASD:Suite. Only formal methods can promise higher quality software in less time and at lower cost. This partnership extends those benefits to more customers with traditional development environments.”

Methods2Business delivers its services to system houses and semiconductor companies who want to improve time-to-market and product quality, and want to minimize the challenges of adopting a new methodology. Methods2Business can help to achieve these benefits for its customers by applying the innovative design and verification methods provided by the ASD design environment.

“Strategic partnerships are of key importance to Methods2Business,” said Marleen Boonen, founder and managing director of Methods2Business. “In Verum, we have found a strategic partner who provides a state of the art, patented development platform utilizing formal methods for software development.”

Methods2Business is investing heavily in training their staff in Software Engineering and the ASD:Suite.

About Methods2Business

Methods2Business delivers expert knowledge and high quality consultancy services for semiconductor companies and system houses seeking to improve their time-to-market and ensure their product quality. Methods2Business helps its customers to achieve these improvements by employing advanced solutions that rely on formal methods. As experts in formal methodologies partnering with leading technology providers, Methods2Business executes complete hardware and software projects for its customers using the most innovative solutions.

About Verum Software Technologies

Verum Software Technologies supplies Software Design Automation that enables software designers to develop complex systems in less time and with zero defects. Experience shows that customers using the ASD:Suite can reduce their software development costs while speeding up development time, recouping their investment in less than three months. ASD:Suite also reduces software rework and maintenance, which in turn leads to much greater customer satisfaction and lower lifecycle management costs. The difference between the ASD:Suite and comparable products is that Verum's ASD:Suite is built on a patented formal verification approach that guarantees the completeness and correctness of a software design.

For more information about Verum, our partner program or a demonstration of the ASD:Suite, please feel free to contact us via info@verum.com or by telephone +31 40 235 9090.
