

Job Specification

Software Application Architects / Designers

Verum exists at the cutting edge of software engineering technology. Our revolutionary software design automation product, the ASD:Suite, is dramatically improving the speed, quality and efficiency with which our customers are able to build complex software systems. Interest in and demand for the ASD:Suite is growing rapidly and therefore we need to expand our customer support team with additional Software Application Architects and Designers.

This is a role for individuals who want to work in a young, dynamic, high-tech company, introducing an exciting new product to an unsuspecting world. It is a role for the out-of-the-box thinker, for the never-say-die doer, the visionary, the evangelist, for individuals who want to do something different that will change the way that software is developed forever.

The job requires you to be able to catalyze the adoption and deployment of the ASD:Suite at Verum's customers. This is a varied and challenging task requiring you to use your knowledge of and experience in software requirements, architecture and design to maximum effect. It starts with you being able to establish your personal credibility in technical (software) matters with the customer's software engineers. You will need to listen to their problems, understand their challenges and take to heart their concerns. You will show them that the ASD:Suite represents an exciting new way to master the difficulties inherent in designing today's complex software systems, that it maximizes their creativity and minimizes the drudgery of conventional, code centric, high rework software development practices and that it can work for them.

The role focuses on helping the customer to do their work using the ASD:Suite and not on doing it for them. It involves advising on and helping them with the impact that the ASD:Suite has on software architecture and design, with applying the ASD:Suite to legacy systems and with integrating the ASD:Suite into their process. The goal of the Software Application Architect/Designer is to get the customer up to speed with ASD as quickly and effectively as possible and then to move on to the next customer.

The is job not an easy one; it requires dedication, intelligence, hard work and a subtle touch. But it is an extremely rewarding one, being part of a team that is on a mission, that is going places, that believes that it can change the world, albeit in a small but significant way. Successful candidates will be people who can convince us that they have the character, skills and experience necessary to "wow" our customers and add to the synergy of our team.

Practical Matters

Successful candidates will be based in Verum's office in Waalre, close to Eindhoven's High Tech Campus. Currently most of Verum's customers are within 200Km of Eindhoven, however Verum's customer base is growing internationally and currently includes companies in Germany, India and the USA. Therefore candidates should expect to travel both locally and on occasion internationally.

Desired Skills & Experience

We are looking for communicative, presentable and naturally credible candidates, people with proven experience in embedded/technical software architecture and design and the ability to convey that experience to customers. We are looking for candidates with character, positively minded people who are confident of themselves and who can justify their confidence to us.

We're not looking for perfect candidates, people who tick all our boxes. But we are looking for the right candidates, individuals whom we feel can assure our customers success.

Company Description

Verum's ASD:Suite is a unique, general purpose, software design automation platform. Incorporating fully automated mathematical verification technology, it enables software engineers to build better, more complex software while delivering a net 30%-50% improvement in productivity and a corresponding decrease in time to market.

How to apply

Send us an up-to-date résumé and your motivation for applying to:
recruitment@verum.com.
