

# Starting ASD Course

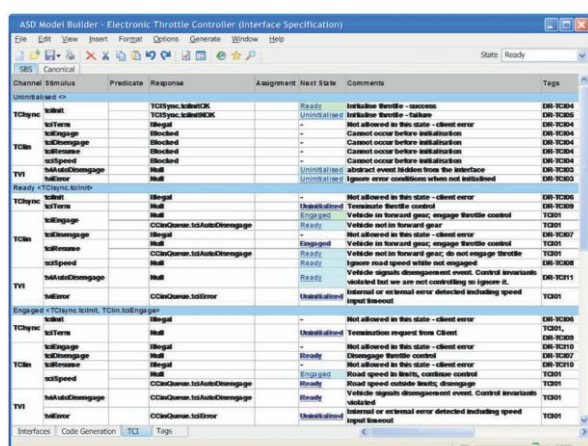

The simple way to build complex software systems

## ASD Fundamentals and Modelling

The Starting ASD course is a three-day course that provides a working introduction in building ASD models. The course is intended for software architects and designers that have just started building ASD models. No prior knowledge of Verum's tools is required.

The course will ensure that you can take the lead in a design project using ASD. The course includes the following topics:

- ASD Architecture: static and run-time aspects
- ASD Process: requirements and change management
- Sequence Based Specifications
- Model Checking
- Code Generation

Hands-on examples and exercises apply the ASD Modelling techniques to realistic problems.

### Prerequisites

Knowledge and experience as software architect and/or designer in complex technical or embedded software engineering.

### Course length

3 days

### Price

€ 1.800,-
