

Press Release

Waalre July 1st 2010

Verum Launches New ASD:Suite Community Portal

Verum Software Technologies BV (July 1, 2010, Waalre Netherlands) announced that on July 8th the company will launch a new Web based ASD:Suite Community Portal. The on-line community will serve as a virtual meeting place for current ASD:Suite users as well as prospective new users. As the number of ASD:Suite users grows monthly, Verum seeks to better serve dedicated software engineers using the ASD:Suite. Verum is committed to improve the ASD:Suite user experience during the coming year with the ASD:Suite Community Portal as the first step in this direction.

The portal will serve users in several ways. There will be an on-line knowledge base, a comprehensive download library of help documents, a threaded discussion forum, news entries relevant to hands-on users of the ASD:Suite and, a model and code library enabling users to share software models and code. In the near term a collection of video tutorials and *how-to's*, blogs by Verum staff, polls (for example about feature requests) will be added. Participation in the ASD:Suite community is free and will be open to everyone by simply registering on the portal site.

On Friday July 9th at 16:30 the company invites all current, future, and other interested ASD:Suite users (or managers) to celebrate the opening of the ASD:Suite Community Portal at Verum's headquarters in Waalre with some drinks & snacks. During this afternoon party, all of Verum's technical staff and many of the management will be accessible for discussions and further exchange of ideas, suggestions and questions you may have.

About Verum Software Technologies B.V.

Verum Software Technologies is a young software tools company focused on turning the art of software development into a fact based science. By adopting formal math based principals for embedded software development, embedded software manufacturers guarantee that such software codes are genuinely defect free in the 21st century. Verum employs a team made up of Formal Methods, Embedded Software Architects, and Embedded Software Tools experts to develop state of the art tools for achieving this goal.
