

ASD Consultant

The consultant is a member of the Market and Business Development group. Their primary role is to support and advise the customer's technical specialists, using the ASD technology. This technology will improve all (or at the least very important parts) of the software design processes in complex technical environments.

The challenge

The consultant will be responsible for managing the change process, necessary for a successful introduction and deployment of ASD. They will be working in a project team together with colleagues and a very experienced ASD senior consultant. The senior consultant has a supportive and coaching role. This organization will ensure that the ASD Consultant is able to achieve the next level in his professional career.

The consultant should be capable of, after the first six months, running a small ASD project of his or her own. After the first year, the consultant will be able to achieve an increased demand for ASD licences and services for all Verum customers.

Qualifications

As an ideal candidate, you will have:

- A degree as a Master of Science in computer science or software engineering,
- 5 to 6 years working experience as a Software Consultant, Software Architect and/or Software Designer
- Experience in at least one of the following domains: Industrial Automation, Automotive, OEM, Telecoms, Process control, Aerospace or Consumer Electronics
- A proven track record made in the following technical fields: analysis, requirements specification, architecture work, senior design work or programming experience
- Knowledge of O/S and platforms such as Windows (NT, XP, CE), Linux, VxWorks or other well-known RTOS
- Experience in the technical languages UML, UML R/T, DCOM, and CORBA
- Excellent skills in English, written and spoken, which are essential to be successful in this international business
